SUMMARY

Automation engineer specialising in n8n. I build production AI workflows, most recently an editor-approved newsroom pipeline that publishes 44 articles a day for a regional news publisher. Other work includes multi-agent human-in-the-loop systems, RAG agents, CRM lead scoring and document processing. A B.Sc in Microbiology and a teaching background make me a clear communicator with non-technical stakeholders. National service completed October 2026; available now for freelance and remote work.

SKILLS

Automation	n8n (primary), Make, Zapier, webhooks, scheduling, error handling and audit logging
AI / LLMs	OpenAI, Anthropic Claude, DeepSeek, xAI Grok; structured JSON output, prompt design, tone-matched rewriting
RAG / Vector DBs	Supabase pgvector, Pinecone
Data & Publishing	RSS / HTML scraping, YouTube API, WordPress REST API, REST and webhook integrations
Business tools	Google Workspace (Drive, Sheets, Gmail, Calendar, Apps Script), HubSpot
Programming	JavaScript, Python
Working style	Workflow mapping, technical documentation, working with non-technical stakeholders

SELECTED PROJECTS

Editorial Content Pipeline: Regional News Publisher (Romania)

n8n | OpenAI | DeepSeek | xAI Grok | WordPress REST API | Google Drive / Sheets / Gmail

- **Multi-source ingest:** RSS feeds, protected web pages, YouTube transcripts, a national bulletin email feed and twice-daily targeted LLM web search, deduplicated into one article store.
- **Scoring and quotas:** GPT-based scoring with a keyword-weighted local-relevance model built from a live table of key public figures. A daily-quota system tracks per-category targets, with a bypass so genuine breaking news skips the quota.
- **Rewrite:** DeepSeek rewrites in the publisher's voice using category-matched tone samples, hard length limits and strict no-fabrication rules.
- **Human approval and publishing:** editors approve through signed email links, with a 24-hour reminder and a 48-hour auto-reject SLA. Approved articles publish to WordPress with images uploaded via the REST API.
- **Reliability:** fault-isolated workflows and a central error logger that records failures from every workflow in one audit table. **Result: 44 articles per day.**

HITL Content Pipeline: Relay

n8n | OpenAI | Built for the n8n community challenge, May 2026

- Three-agent content system (strategist, creative director, reviewer), each paired with a structured human approval form.
- Feedback accumulates across revisions so agents do not repeat rejected work. A three-way router lets the reviewer approve, send fixes back to the writer, or return to the strategist for a new angle.
- Character-limit and hashtag compliance run in code, because LLMs cannot count reliably and the final check has to be right every time.

RAG Knowledge Agents

n8n | Supabase pgvector | Pinecone

- Two retrieval-augmented agents built on different vector stacks: Supabase (self-managed pgvector, low storage cost) and Pinecone (managed, higher recall at scale). I have made the vector-store trade-off in real builds.

Lead Scoring and CRM Sync

n8n | OpenAI | Google Sheets

- Webhook-triggered lead qualification. Each lead gets a 1-10 score, a High / Medium / Low band and written reasoning, with structured output parsing, a deterministic fallback if parsing fails, and a clean append to a Sheets-backed CRM.

Document Processing Pipeline

n8n | Google Drive | OpenAI

- Drive folder watcher that categorises incoming files (invoice, contract, resume, report, receipt), suggests consistent file names and routes each file to its folder. Handles unknown file types gracefully.

Also built: a parallel-agent content repurposer (blog post to Twitter thread and LinkedIn post) and a Gmail-triggered AI responder that drafts tone-matched replies as drafts and never auto-sends.

EXPERIENCE

Automation Engineer (Freelance, Remote)

Independent | September 2025 to present

- Design and ship production automation systems for editorial content, marketing and lead management. Selected projects above.

Biology and Digital Technology Teacher (NYSC)

Fetab College, Ibadan | November 2025 to October 2026

- Taught biology and digital technology to secondary school students. National service completed.

Mathematics and Physics Tutor

Emerald Consult, Ibadan | 2025 to present

Primary School Teacher

Hand of God School and Hall of Fame Academy, Lagos | 2020 to 2022

EDUCATION

B.Sc Microbiology, Federal University of Agriculture, Abeokuta (FUNAAB) | 2021 to 2025 | Second Class Upper Division
