AI-Powered Newsroom Automation

Case study | Built in n8n for a regional news publisher in Romania

From dozens of raw sources to approved, published articles, every day.

44	12	16	9	1-click
articles per day	content sections	RSS & web sources	YouTube sources	editor approval

WHAT IT DOES

A fully automated content pipeline that watches a wide range of news sources, picks the stories that matter, rewrites them in the publication's own voice, and publishes them to WordPress after an editor approves them. It runs on a schedule with no manual copy-pasting, and handles Romanian-language content end to end.

HOW IT WORKS

1 INGEST

Monitors RSS feeds, web pages (including Cloudflare-protected ones), YouTube transcripts, X/web search via Grok, and editor-forwarded email bulletins. Duplicates are filtered out.

2 SCORE

AI sorts every story into 12 categories, scores it on 4 criteria, and assigns a priority tier: breaking, local or national.

3 REWRITE

Rewrites each story in the house style, guided by about 300 reference articles, within a daily quota for each section.

4 APPROVE

The editor gets an email preview and approves or rejects each article with one click.

5 PUBLISH

Approved stories go to WordPress with category mapping and a featured image. Stale drafts are cleaned up automatically.

BUILT FOR RELIABILITY

- Fault-isolated workflows: one failure never stops the rest
- Central error log captures every failure for review
- Daily quota tracked per section (target / pending / published)
- Human approval step before anything goes live
- Duplicate detection across all sources

TECH STACK

Automation	n8n (self-hosted workflows and data tables)
AI models	GPT-4o-mini (scoring), DeepSeek (rewriting), xAI Grok (live search)
Delivery	WordPress REST API, Gmail, Google Drive
Sources	RSS, HTML scraping, YouTube API and transcripts, email bulletins

WHAT A SIMILAR SETUP COULD DO FOR YOUR NEWSROOM

- Monitor your key sources around the clock and flag the stories worth covering.
- Prepare first drafts in your house style, so editors spend time on the stories only they can write.
- Keep every article behind an editor's approval before anything is published.
